DETAILED ACTION

Claim Rejections - 35 USC § 102/103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 15, 16 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over WO 98/18330 for the reasons of record and the further reasons below.

WO 98/18330 was discussed in the prior Office Action and the same is incorporated herein.

Examiner has duly considered Applicant's arguments but deems them unpersuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., silver which has been incorporated into the polymer of the lens, prior to forming the lens and subsequently activated by treatment with an oxidizing agent) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Further, the claims are directed to a lens case not contact lenses, as such, the definition on Page. 3, lines 20-22, relating to "activated silver" does not appear to be applicable. For the same reasons, Applicant's reference to experimental data does not overcome the rejection as said data is related to contact lenses not a lens case. Also, contrary to Applicant's arguments the silver is incorporated into the polymer from which the contact lens case is made (See example 1 of example 2). Finally, Applicant has shown that the prior art contact lens case does not have an oxidizing agent. Applicant's Specification clearly indicates that iodine is an oxidizing agent, as such, the burden is on Applicant to show that the iodide/potassium iodide does not act as an oxidizing agent.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nissen et al. in view of EP 1 050 314 and Stockel (US Pat. 5,312,586) for the reasons of record set forth in the prior Office Action and the further reasons below.

Nissen et al., EP 1 050 314 and Stockel were discussed in the prior Office Action and the same are incorporated herein.

Examiner has duly considered Applicant's arguments but deems them unpersuasive.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 231 USPQ 375 (Fed. Cir. 1986). Further, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those

of ordinary skill in the art. See In re Keller, 642 F.2d 413, 208 USPQ 871 (CCPA 1981). As such, the fact that Stockel does not disclose a lens containing an antimicrobial agent does not overcome the rejection herein wherein the prior art teaches the combination of both silver containing lenses and other sterilization procedures, including hydrogen peroxide systems.

Page 4

Applicant argues that the Materials and Methods section on page 3 neither discloses nor suggests that coated lenses be contacted with an oxidizing agent, however, the reference is cited for the teaching that sterilization of contact lenses typically involve use of hydrogen peroxide systems, which is an oxidizing agent, or other antimicrobial agents and that silver containing contact lenses do not completely replace other sterilization procedures. Applicant argues that EP 1 050 314 teaches away from the claimed invention, however, the cited passage is to a preferred embodiement (EP 1 050 314, Column 11, lines 12-13). As such, contrary to Applicant's arguments, neither Nissan et al. nor EP 1 050 314 expressly disclose that conventional disinfection processes are not necessary.

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. Merck & Co. v. Biocraft Laboratories, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). Disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. In re Susi, 169 USPQ 423 (CCPA 1971). "A known or obvious composition does not become patentable simply because it has been described as somewhat inferior to some other product for the same use." In re Gurley, 31 USPQ2d 1130, 1132 (Fed. Cir. 1994).

Art Unit: 1616

Applicant argues that the results obtained in Example 5 overcomes the rejection herein. However, the results are not commensurate in scope with the claimed invention, in that Example 5 is direct to a specific lens formulation, a single pathogen, Pseudomonoas aeruginosa, and a specific oxidizing agent, sodium hypochlorite. Also, Applicant appears to misstate the data. Table 3 indicates that the solution was clear or opaque not that the lens were clear or opaque. Finally, one of ordinary skill in the art would expect that addition of sodium hypochlorite, which is antimicrobial, combined with the silver would result in increased antimicrobial activity and that high bacterial counts would reduce the clarity of the test solutions.

Therefore, the claimed invention, as a whole, would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the references.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

A facsimile center has been established in Technology Center 1600. The hours of operation are Monday through Friday, 8:45 AM to 4:45 PM. The telecopier number for accessing the facsimile machine is (703) 872-9306.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Choi whose telephone number is (703) 308-0067. Examiner maintains a flexible schedule. However, Examiner may generally be reached Monday-Friday, 8:00 am -5:30 pm (EST), except the first Friday of the each biweek which is Examiner's normally scheduled day off.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Mr. Thurman Page, can be reached on (703) 308-2927. Additionally, Technology Center 1600's Receptionist and Customer Service can be reached at (703) 308-1235 and (703) 308-0198, respectively. FIC
